EOS Marketplace V1

Guide d'installation

Version 1.0

Front-end

Running the app on your mobile
1. Install Node.js
2. Install Expo on your Mobile [IOS](#)/[Android](#)
3. Install ExpoCli: `npm install --global expo-cli`
4. Open a terminal inside the folder EOSFrontEnd and run the command `npm install`
5. Run the command `npm start`
6. On your device, download the AnchorWallet app and import the following test accounts private keys if you don't have one in the testnet:
   - Account 1:
     5JxmmKVBqcxxsYcmgmEWWNbu2yTArD1ydu7gojW7aGjWvCF2NCg
   - Account 2: 5JHK9gTN4XTK1vgJBAShEpnfLdVUkQy7L2rZVd31okHNcdB9Nz4
8. Scan the QR code on expo from your device
9. If you don't have account on the Jungle Testnet, sign up with the following EOS account name:
   - Account 1: alicetesteos
   - Account 2: nicoltesteos

Server is currently running on the cloud but you can run it locally and access the code on github.

Back-end

Running the server on your computer (local):
1. Install node.js
2. Run `npm install`
3. Run `npm run dev`

The server should be running on your machine. By default, the front-end is using the production server on google cloud. You will need to change the ip constant in the code source of the front-end to your local ip.
